Objective

Aspiring Data Scientists with a solid foundation in Computer Science, Object-Orientated Programming, and statistical modeling. Hands-on experience preprocessing large datasets and engineering analytical tools using Python, Java, and SQL. Eager to apply machine learning principles and robust debugging skills to solve complex backend and predictive analytics challenges in a fast-paced development team.

EDUCATION

Richfield Graduate Institute of Technology | 2024-2026

Expected Graduation: 2027

Bachelor of Science in Information Technology (Data Science)

Relevant Modules: Machine Learning • Artificial Intelligence • Programming • Software Engineering • Cyber Security

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL

Data Analytics: Pandas, NumPy, Matplotlib, Streamlit, Data Analysis, Data Visualization, Data Cleaning, Machine Learning Fundamentals.

Software & Tools: Git, GitHub, Visual Studio Code, NetBeans, Jupyter Notebook, Microsoft Excel, Word, PowerPoint, Outlook.

FEATURED PROJECTS

Ai CV Analyzer

- Engineered a Python and Streamlit web application utilizing Natural Language Processing(NLP) to automate CV screening and comparison against target job descriptions.
- Implemented TF-IDF and Cosine Similarity algorithms to compute real-time compatibility scores, accurately identifying missing keywords to improve resume ATS pass rates.
- Designed an intuitive user interface that streamlined text preprocessing and extraction, enabling job seekers to make data driven optimizations to their professional profiles.

Student Performance Dashboard

- Developed and deployed an interactive analytics dashboard using Python and Streamlit to evaluate student academic metrics and performance trends.
- Synthesized raw student data into actionable insights, engineering interactive charts and data visualizations that reduced performance review times.
- Utilized advanced data exploration techniques to uncover critical historical trends across diverse subject areas, supporting educators in identifying student requiring targeted academic intervention.

Student Performance Analysis Dashboard

- Engineered data pipelines to clean and preprocess complex student demographic and academic datasets utilizing Python, Pandas, and NumPy.
- Synthesized critical educational insights by developing interactive charts in Matplotlib, exposing key correlations between study habits and final grades.
- Architected and deployed using Streamlit, enabling educators to seamlessly track real-time student performance.

PROFESSIONAL SKILLS

- Analytical Thinking
- Problem Solving
- Learning Agility
- Team Collaboration
- Communication
- Accountability
- Adaptability
- Time Management
- Attention to Detail
- Continuous Learning

LANGUAGES

- English
- Sepedi
- Setswana
